

GENERATIVE ENGINE OPTIMIZATION AUDIT

Your content is excellent. AI just can't see it.

A full GEO audit measuring how discoverable, citable, and recommendable growthliftstudio.in is to ChatGPT, Claude, Perplexity, Gemini & Google AI Overviews.

Date: July 5, 2026

Site: growthliftstudio.in

Type: Lead-gen agency

Pages: 14 analyzed

POOR

The paradox in one line

You've done the hard parts of GEO right — genuinely great, quotable content and near-perfect crawler permissions — yet the site is nearly invisible to AI. Two structural failures cancel almost everything out.

Highest-leverage fix: prerender the 14 routes to static HTML. That single change converts a large body of already-written, highly citable content — and all your per-page schema — from an effective **0** into an **~80**, and lifts four of the six categories at once.

● What's working

- **Content quality is excellent (80/100)** — real Ads-Manager screenshots, specific CPL/ROI numbers, honest pricing, a full author block. Assessed as clearly human-authored.
- **Permissions are near-perfect** — robots.txt explicitly allows GPTBot, ClaudeBot, PerplexityBot, CCBot & more.
- **A rich, hand-written 11ms.txt** is currently carrying nearly all of your AI visibility.
- **Security & URLs are pristine** — HSTS preload, scoped CSP, clean hyphenated routes (100/100 security).

● What's killing the score

- **Client-side rendering, no SSR.** Every page serves an empty `<div id="root">` to non-JS AI crawlers — your content & schema are invisible to them.
- **Wrong publish dates** hardcoded on 3 of 4 blog posts — a real, cheap-to-fix data bug feeding false freshness signals.
- **Near-zero third-party footprint** — no Wikidata, thin LinkedIn, undiscoverable YouTube/Instagram, no Reddit or review sites. AI has no external anchor to trust the entity.

01 **Score breakdown**

Six weighted categories combine into the composite GEO Score. Content is the clear strength; everything downstream of the rendering gap suffers.

02 AI platform readiness

The client-side-rendering gap hurts every platform — but hits the non-JS-rendering engines (ChatGPT, Perplexity) hardest, since they read raw HTML and see nothing.

Google AI Overviews

Googlebot renders JS
(deferred)

48

Google Gemini

Render path + Knowledge
Graph gap

42

Bing Copilot

Unreliable JS; broken
IndexNow key

30

ChatGPT Search

GPTBot does not render JS →
near-blind

28

Perplexity AI

Minimal JS; heavy Reddit
reliance (none)

24

03 Prioritized findings

● Critical — fix now

● High — this week

● Medium — this month

● Low — when possible

C1 · CRITICAL Client-side rendering hides all body content from AI crawlers

Affects: all 14 routes · `vercel.json` , `dist/index.html`

Pure CSR React SPA. Every URL serves the same shell whose `<body>` is just `<div id="root">` ; content renders from a ~623 KB JS bundle. GPTBot, ClaudeBot, PerplexityBot & CCBot see an empty body on every page.

Fix → Add build-time prerendering of the 14 routes. Fastest: a `react-snap` postbuild (zero code changes). Durable: migrate rendering to Astro / `vite-react-ssg` / Next SSG on Vercel. Lifts Technical, Schema, Citability & Platform at once.

C2 · CRITICAL Per-page title, description, canonical & schema all default to the homepage

Affects: all routes · `src/components/SEO.tsx`

All per-page SEO is injected client-side via `useEffect` . To a non-JS crawler, every one of the 14 pages looks like a near-duplicate homepage stub with a homepage canonical.

Fix → Bake per-route title/description/canonical + JSON-LD into static HTML during the C1 prerender. Interim: emit a self-referencing `<link rel="canonical">` per route.

C3 · CRITICAL Wrong `datePublished` on 3 of 4 blog posts (data bug)

Affects: all blog posts · `src/pages/BlogPost.tsx:294`

The BlogPosting schema hardcodes `"2026-05-24"` for every post (real dates: May 4 → Jun 24), and there is no `dateModified` at all. Freshness is a major GEO signal and this is actively false.

Fix → Add `datePublished` / `dateModified` ISO fields per entry in `blogPosts.ts` and reference them. ~15-minute fix — do it regardless of the rendering work.

C4 · CRITICAL Near-zero third-party footprint → no AI entity recognition

Affects: brand-wide (off-domain)

No Wikipedia/Wikidata entity, a thin LinkedIn page (typo “appointments”), undiscoverable YouTube/Instagram, zero Reddit or Clutch/G2/Trustpilot. AI decides if an entity is real from third-party signals — here there are almost none.

Fix → Create a Wikidata item; claim Clutch/G2/Trustpilot, Google Business Profile & Bing Places; rebuild the LinkedIn page; begin authentic founder participation on Reddit.

H1 · HIGH IndexNow key file is a false positive

`/.well-known/indexnow-key.txt` returns 200 but serves the SPA shell, not a UUID — so IndexNow submissions fail verification and Bing/Copilot get no instant-index benefit.

Fix → Serve a real static UUID key (`text/plain`) excluded from the SPA catch-all; wire a publish-time IndexNow ping.

H2 · HIGH Best-in-class blog content earns zero AI value while JS-gated

The 4 data-rich posts are your strongest citable asset and are 100% invisible to non-JS crawlers.

Fix → Prioritize these 4 routes in the prerender; ensure BlogPosting + FAQPage + author Person render into static HTML.

H3 · HIGH Unsourced statistics stated as fact

The kitchen post cites “391% conversion boost” and “21× less likely to qualify” with zero attribution. AI engines and rater guidelines discount unsourced hard numbers.

Fix → Add inline attribution + outbound links (Lead Response Management / Harvard-InsideSales). Bonus: creates the missing outbound-citation signal.

H4 · HIGH Founder `Person` node is thin and not linked into a graph

Static `founder` has `name` only — no `jobTitle`, `image`, `sameAs`, or `worksFor` — and the four static blocks share no `@id`, so AI sees four disconnected objects. Author photo uses an unreliable Google Drive URL.

Fix → Enrich the founder Person, add stable `@id` s linking org ↔ founder ↔ services into one `@graph` , add an org `logo` , self-host the image.

H5 · HIGH **Case-study outcomes are unverifiable**

“8 confirmed jobs in 30 days” and “21 leads in NYC @ \$55” carry no client name, dated proof, or link — the weakest form of authoritativeness.

Fix → Cross-link case studies to the matching named testimonials already on-site; add a redacted dashboard export.

M1-M8 · MEDIUM **Eight month-scope improvements**

Undiscoverable social profiles · per-page schema (BlogPosting/FAQ/Breadcrumb) JS-only · no `AggregateRating` / `Review` despite real testimonials · no `dateModified` /refresh cadence · author bio omits “6 yrs / 16 clients” · schema-vs- `11ms.txt` trade-scope drift (roofing/HVAC/plumbing) · `11ms.txt` missing a link section & `11ms-full.txt` · no Reddit/community validation.

L1-L7 · LOW **Seven optimizations when possible**

Repeated template across Google Ads posts · thin corpus / no pillar page · free-text `priceRange` · stale sitemap `lastmod` · no `Content-Signal:` directive · CSP `'unsafe-inline'` · large PNGs (300–750 KB) → convert to WebP/AVIF with explicit dimensions.

Quick wins — this week

1

Fix the hardcoded publish-date bug

~15 min

Add real ISO `datePublished` / `dateModified` per post — corrects a factual error AI reads today.

2

Ship a react-snap prerender of all 14 routes

~half day

The single biggest lever — no framework migration required to start.

3

Attribute the 391% / 21× statistics

~30 min

Named sources + outbound links — improves trust and adds citation signals.

4

Enrich founder schema + @graph + logo

~30 min

Directly in `index.html` — crawler-visible immediately, no build change.

5

Create Wikidata + claim Clutch / Google Business Profile

~1-2 hrs

Begins the off-domain entity anchor that AI needs to trust the brand.

05 30-day action plan

WEEK 1

Stop the bleeding — code fixes

- ☐ Fix `datePublished` / `dateModified` in `blogPosts.ts` (C3)
- ☐ Enrich founder Person, add `@graph` `@ids` + org logo (H4)
- ☐ Audit `SEO.tsx`; add canonical fallback awareness (C2)
- ☐ Attribute the 391% / 21× stats with sources (H3)

WEEK 2

Rendering — the big one

- ☐ Implement prerendering; all 14 routes ship static HTML + per-page meta/schema (C1/C2)
- ☐ Verify with `curl` (no JS) that bodies & schema appear in raw HTML
- ☐ Fix the IndexNow key file + publish-time ping (H1)

WEEK 3

Entity & authority

- ☐ Create Wikidata item for the brand + Binayak Dey (C4)
- ☐ Claim Clutch, G2, Trustpilot, Google Business & Bing Places (C4)
- ☐ Rebuild LinkedIn company page; fix the typo (M1)
- ☐ Cross-link case studies ↔ named testimonials + dashboard proof (H5)

WEEK 4

Content depth & polish

- ☐ Add quantified credentials to the author bio (M5)
- ☐ Pillar page; plan roofing/HVAC/plumbing posts; reconcile trade scope (L2/M6)
- ☐ Add `## Pages` links + generate `11ms-full.txt` (M7)
- ☐ Convert PNGs → WebP/AVIF; add route code-splitting (L7/CWV)
- ☐ Begin authentic Reddit participation; publish NYC case study (M8)

06 Appendix — pages analyzed

All 14 pages share the CSR baseline (empty body + homepage-only metadata to non-JS crawlers). Below are the *additional* page-specific findings.

URL	Intended title	Additional GEO issues
/	Lead Generation for Home Improvement Contractors	Homepage schema OK; thin founder node (H4)
/services	Services	BreadcrumbList JS-only
/results	Case Studies	Unverifiable outcome claims (H5)
/faq	FAQ	FAQPage (8 Q&A) JS-only
/testimonials	Testimonials	No Review/AggregateRating schema (M3)
/about	About	AboutPage JS-only; strong trust content trapped
/contact	Contact	Real NAP present but JS-gated
/blog	Blog index	No ItemList schema
/blog/facebook-ads-bathroom-remodeling-contractors	FB Ads for Bathroom Remodeling	BlogPosting JS-only; strong content invisible (H2)
/blog/google-ads-kitchen-remodeling-contractors	Google Ads for Kitchen Remodeling	Unsourced stats (H3); wrong date (C3)
/blog/google-ads-bathroom-remodeling-contractors	Google Ads for Bathroom Remodeling	Wrong datePublished (C3)
/blog/google-ads-window-replacement-contractors	Google Ads for Window Replacement	Wrong datePublished (C3)
/privacy-policy	Privacy Policy	Low GEO priority

URL	Intended title	Additional GEO issues
/terms-conditions	Terms & Conditions	Low GEO priority
